Regain reporting Add LIVE analysis Boost revenue

There's a lack of reporting within Progress OpenEdge10. It's threatening a key revenue stream for Progress partners. DataPA solves the problem - and it delivers unparalleled tools for live business analysis, as DataPA CTO and co-founder Nick Finch explains.

Progress OpenEdge10 offers enhanced flexibility, and some great new functionality. But the missing Report Builder presents a real dilemma to developers. Customers won't upgrade from version 9 only to miss out on valuable business intelligence. So to retain the revenue stream, you've got to replace the report function.

The good news is that DataPA is helping developers worldwide to support customers such as Twinings, Boots and Moog to solve this problem, with reporting functionality that's actually better than ever before. Plus, it can be used to deliver a full, real-time business intelligence solution - helping you boost your revenue into the long-term.

DataPA: a scalable revenue stream

DataPA is a world-trusted, real-time business intelligence suite that is entirely focused on Progress. Featuring sophisticated reporting and analysis, it can be embedded into Progress OpenEdge10 with ease. But that's not all. DataPA is also the only Progress-focused solution that enables complex analysis - live - without the need for data warehousing.

Step-by-step: the long-term benefits of DataPA

Through DataPA, we can help you increase customer satisfaction, whilst giving you a scalable path to extra revenue:

- **Restore the embedded reporting function to Progress OpenEdge10.** DataPA builds queries quickly using the Progress ABL.
- **Create customised, valuable reporting and analysis tools,** for further intelligence and flexibility. Because it is designed to be very easy to use, anyone can produce dashboards, enjoy Microsoft Office add-ins and more.
- **Create a new revenue stream by offering a full, live Business Intelligence solution to IT departments and end users.** Beyond simplistic lists, and with no need for overnight data warehousing, DataPA uses in-memory analytics to analyse complex business information - live. From the board room to the shop floor, this gives users real insight into business performance.
